

PC Matic **MSP**

AMERICA'S ANTIVIRUS

▶ [**pcmatic.com/msp**](http://pcmatic.com/msp)

SUPERIOR SECURITY

PC Matic MSP provides industry leading endpoint security. With the only globally automated whitelist, our protection takes a default-deny approach. In a world full of ransomware and other threats, it's critical to provide preventative security. The white list approach proactively blocks polymorphic viruses, APT's (advanced persistent threats), zero day attacks, and ransomware.

Listening to communications between processes, PC Matic works to thwart suspicious activity such as fileless infections using advanced heuristics to block the specific scripting engine.

REMOTE MANAGEMENT

Convenient, reliable, and centralized control over your customers is the backbone of an endpoint security and management solution. PC Matic MSP not only provides a single pane of glass that can be managed from anywhere in the cloud, but deep management functions over each device.

From VNC and CMD Prompt access, to remote reboot and RDP security, PC Matic MSP supplies all the necessary tools for a managed service provider.

PC Matic MSP blows by the competition in the prestigious VB100 RAP test.

PC Matic MSP opens a world of remote management tools.

BEYOND ANTIVIRUS

PC Matic MSP at its core provides whitelist based endpoint security. But, it also provides a suite of features including patch management, driver updates, and performance optimization to round out the solution you can provide to customers. Having a complete tool set to service customers within one single solution can simplify your management and increase customer satisfaction.

Patch Management can be completely customized by Customer, Group, or Device using version control for each individual application. Updates can be turned off and scheduled to control when and if they are allowed to proceed.

PC Matic MSP's patch management covers the applications listed below :

- ▶ 7-Zip
- ▶ Adobe AIR
- ▶ Adobe Flash Player ActiveX
- ▶ Adobe Flash Player
- ▶ Adobe Flash Player PPAPI
- ▶ Adobe Reader
- ▶ Adobe Reader MUI
- ▶ Adobe Reader XI
- ▶ Adobe Shockwave
- ▶ FileZilla
- ▶ Foxit Reader
- ▶ Google Chrome
- ▶ iTunes
- ▶ Java 32
- ▶ Java 64
- ▶ Mozilla FireFox
- ▶ Mozilla SeaMonkey
- ▶ Mozilla Thunderbird
- ▶ OpenOffice
- ▶ Opera
- ▶ PDF Creator
- ▶ PDFX Change Viewer
- ▶ QuickTime
- ▶ Real Player
- ▶ Safari
- ▶ Skype
- ▶ Winamp
- ▶ WinRAR
- ▶ WinRAR5.x
- ▶ WireShark

CLOUD CONSOLE

Access all of PC Matic MSP's great features from anywhere through our cloud management console. With a single pane of glass for endpoint management right in your web browser, you open up a world of flexibility. Take advantage of bulk deployments over Active Directory networks, remote into your customer's computer to assist with a problem, manage alerting and track hardware performance all while never leaving your browser.

Supplement our global whitelist with the local whitelist that can be customized at any level of your account. Have a customer with a program that is being stopped as unknown? Solve the problem in a few clicks by adding it to their customer whitelist right in your management portal.

The screenshot displays the PC Matic MSP Cloud Console interface. At the top, there's a search bar and user information: 'Logged in as: user@domain.com'. The main header shows 'ABC Electric' with options to 'Edit Customer Info', 'Notes', and 'Network Computers'. Below this, there's a 'Filter By Group' dropdown set to 'All Groups'. A row of icons represents various management functions: 'Installer Downloads', 'Master Scheduler', 'Manage Whitelists', 'Alert Notifications', 'Supershield Options', 'Software Management', and 'Alert Options'. A 'Toggle View' section is visible, with 'Devices' selected. Below this is a table of devices:

Device Name	Last Seen	Last Test	Next Test	Group	Status	Actions
Andy Dev Server	2018/08/31 13:03:51	2018/08/27 22:01:10	None Scheduled	IT	🔴🟢🟡	🔍🔄🗑️

ANDY-ASUS	2018/08/07 13:16:12	2018/08/06 22:00:09	None Scheduled	IT	🔴🟢🟡	🔍🔄🗑️
Andy's Server	2017/10/16 18:19:59	None	None Scheduled	Sales	🔴🟢🟡	🔍🔄🗑️

CONNECTWISE AUTOMATE

PC Matic MSP supports an available integration with Connectwise Automate for management and deployment.

The PC Matic ConnectWise Automate integration is designed to provide easy access to the cloud-based console for a single point of interaction. With support for the virus scan feature of Automate, you can monitor PC Matic's install status and definition date right from the control center of each machine. Deployment can also be done through Automate using scripted Actions that are supplied within the integration. This allows for an easy remote push install out to devices individually or in bulk that you already service through Automate.

ABOUT US

PC Pitstop was founded in 1999 as the Internet's only free computer diagnostic web site. 16 years later, the site remains free and high traffic. PC Pitstop is known through its TV advertising for its consumer facing computer security and maintenance product, PC Matic.

Everyone claims to have the best security, however PC Matic MSP is the only solution that uses a globally automated whitelist to provide default-deny protection. Shifting the focus to prevention and not reaction gives PC Matic MSP the most secure posture in the industry. In a world of unknown malware and ransomware threats, prevention is critical.

As we demonstrate in our TV marketing, PC Matic does its support, research, and development exclusively in the United States. In fact, all other security products have their research and development in foreign countries including McAfee and Symantec.

We commit that as we grow, we will continue to stay true to remaining a 100% USA based company.

PC Matic MSP Features :

**Automated Global White list
Patch Management
Cloud Based Management Console
Remote Control (VNC)
Customizable Alerting
Remote CMD Prompt
Detailed Reporting
Policy Based Management
Driver Updates
Remote Reboot
Disk Defragmentation
Optimizes SSD
Performance Benchmarking
Custom Scheduling
Responsive Design - Manage From Any Device
Junk File Cleaning
Performance Optimization
Node.js Allows Real-Time Status and Control
Software Version Control
USB Device Control
Server Security
SMS & Email Alerts
ConnectWise Automate Integration
Customer Prospecting Tool
Support for Whitelabeling**
