

PC Matic MSP delivers antivirus in a completely new package. Provide whitelist based security for your customers from a centralized cloud console with a wealth of remote management tools built right in. We're combining all of your most important MSP tools into one single cloud console that's secured by Multifactor Device Authentication.

## Innovative Security & Remote Management

### Whitelist Security

Our realtime protection, SuperShield, provides default-deny protection against unknown malware and ransomware on your network. Using our global whitelist, we remove the work that normally comes with Application Whitelisting; an NIST recommended approach.

### Remote Tools

Access a suite of Remote Management Tools inside of your PC Matic MSP Cloud Console. From anywhere in the world, you can quickly VNC into a user's machine, open a Remote CMD Prompt to run scripts locally, browse and upload to file directories, remotely shutdown, and more.

### RDP Security

PC Matic's RDP Lifeline provides a suite of security and management tools for RDP. Introduce whitelist based protection for RDP sessions, get realtime SMS alerting with quick actions to kill an active session, and review expansive reporting that includes IP, location, duration, device name, etc.

# PC Matic MSP Feature Breakdown

**Cloud Console** - PC Matic MSP is hosted on AWS and provides a simple interface to manage your customers from any device anywhere in the world.

**Multi Tenant Structure** - Create an infinite number of customers, groups, and devices while applying any custom settings or policies across the structure.

**Device Authentication** - Keep your console and tools secure with proprietary authentication that blocks all unauthorized devices from access.

**Whitelist Security** - Default-deny security blocks all unknown executions backed by our 12 million (and counting!) Global Whitelist of applications.

**RDP Security** - Protect Remote Desktop Protocol by creating a whitelist of allowed devices while immediately blocking all unknown device sessions.

**RDP Management** - Remotely enabled, disable, schedule, or temporarily open RDP from the cloud. Review detailed session history logs, and more!

**Integrated VNC** - PC Matic MSP includes an integrated VNC that allows for secure remote access to any device in your console in just two clicks!

**Remote CMD** - Without disturbing active users, send commands in realtime with our remote command prompt. Troubleshooting has never been this easy!

**File Manager** - A full remote file directory is included for each device on your account. Quickly upload or download files for any customer machine.

**Anti-Tamper Protection** - Uninstalling and service tampering are completely blocked at the local device. Keeps your security in place where it should be!

**Realtime RDP Alerts** - If a new RDP session is established, you can get realtime SMS & Email alerts with quick actions to kill the session and more!

**Remote Reboot & Shutdown** - Send an immediate signal to any or all devices in one click to shutdown or reboot after you've applied updates!

**Local Whitelist** - Have a customer running proprietary apps? Locally whitelist them in seconds across the entire organization by hash, digital signature, or folder path.

**Fileless Malware Prevention** - PC Matic MSP's heuristics proactively block script based attacks that defeat normal blacklisting and whitelisting security solutions.

**Patch Management** - Automatically update over 30 different third party applications to keep your customers machines secure from vulnerabilities.

**Automated System Cleanup** - Scheduled scanning removes malware, junk files, unwanted services or startups and more!

**Expansive Alerting & Reporting** - Customize alerts and reports to keep yourself and your customers informed via SMS or Email.

*Does your antivirus solution do all of that?*
